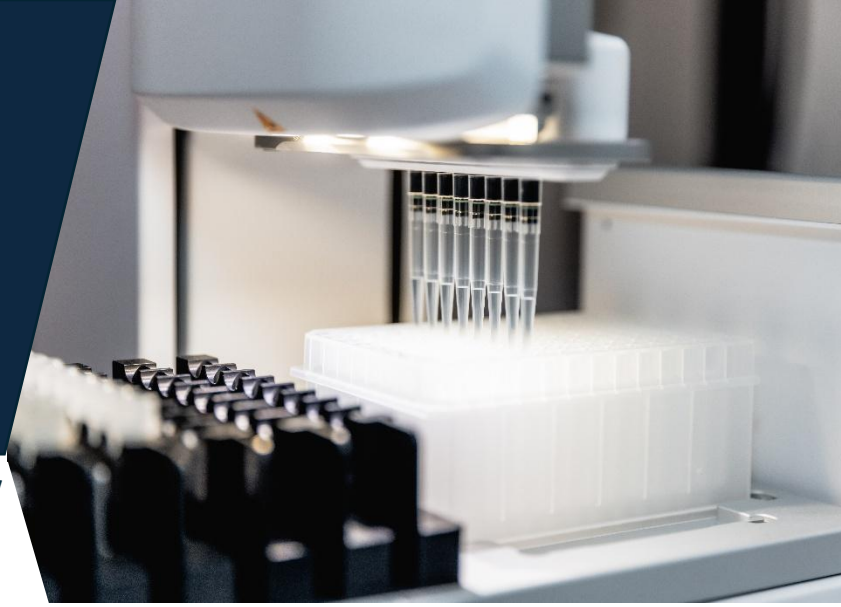
MOVE ANALYTICAL

MoveKit™ BA

COMPLETE BILE ACIDS SOLUTION



A fully integrated, targeted LC-HRMS workflow for quantifying bile acids. Includes reference materials, 32 stable-isotope standards, and a library of 151 semiquantitative targets including microbial-conjugates and free fatty acids. Automated queue generation, SST, data checks, and peak assignment.

10X FASTER DATA ANALYSIS

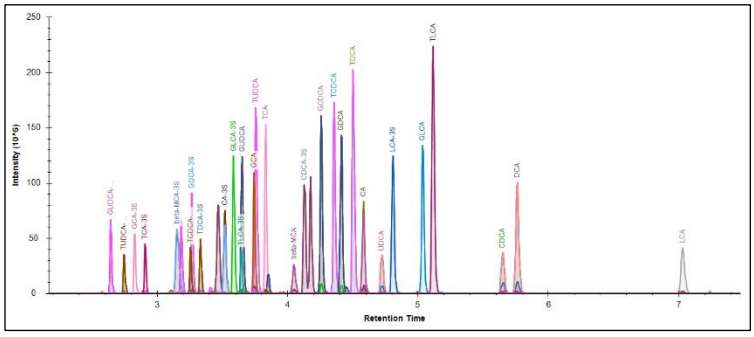
30-minute sample prep, automated peak assignment and project-based automation.

CONFIDENCE BUILT IN

32 stable-isotope internal standards. Real-time SST and data checks. Uses 20 µL of specimen. Validated on serum, plasma, urine, and feces.

HIGHEST COVERAGE

183 total targets, 16 sulfated bile acids, muricholic acids, glucuronides, microbial conjugated BAs, and free fatty acids.



LC-MS analysis from **MoveKit BA**, including the highest coverage of sulfated and modified bile acids of any commercial workflow.

WHAT MoveKit™ BA IS (AND ISN'T)

Targeted LC-HRMS workflow	☑
32 stable-isotope internal standards + complete Cal/QC	☑
Automated SST, Data Check, and Quant workflow	☑
All-inclusive software + kit	☑
A Black Box	☒
Locked Target List	☒
Locked in to using entire kit at one time	☒

PRICING & ORDERING

MoveKit™ BA (MKIT-003)

- $3500 per kit (89 samples at $40 each).
- Includes preparation kit, standards, mobile phase additive, and the full software workflow.
- You provide the column and instrument.
